

Upcoming Events:

Join us on Wednesday, September 11, 2013 for a unique educational opportunity as Dr. Amarik Singh hosts Roger P. Levin, DDS and we discuss how to **“Set Your Practice on Fire! New Strategies for Increasing Production and Creating a Superior Practice.”**

Roger P. Levin is chairman and CEO of Levin Group, Inc., the leading dental practice management firm. Dr. Levin is one of the profession's most sought-after speakers, bringing his Total Practice Success Seminars to dentists and dental professionals throughout North America. For more than 25 years, Dr. Levin and Levin Group have been dedicated to improving the lives of dentists.

In 2013, look forward to Dr. Singh lecturing on several of the hottest topics in dentistry today:

“The Chicken or the Egg? Periodontal- Endodontic Lesion”

“Treatment Solutions for Edentulous Patients”

More information to follow

The Truth About Teeth in A Day

Dental implants are perhaps the most important advancement in dentistry over the past 50 years. These permanent, natural looking replacements for missing teeth have changed the lives of millions of people by enabling them to eat solid foods, advance their careers, find romance, and enhance their overall quality of life.

In fact, in the year 2000, approximately 910,000 implants were placed in patients in the United States. Today, the number of implants placed per year is approaching the 5 million mark. Consumer demand is huge, based largely on the needs of the aging baby boomer population.

Part of this increased consumer demand is being driven by slick advertising campaigns from high-volume dental implant clinics that may lead you to believe that all dental implants can be placed in one day. The fact is that this is not always true. Dental implants are not a “one size fits all” solution and each patient's unique case is based on the following factors:

- The age of the patient
- How long the tooth has been missing
- Pre-existing periodontal disease
- Overall patient health
- Individual's rate of healing
- Whether the implant is in the front or back of the mouth

Unfortunately, many high volume implant clinics won't tell your patient this until they are sitting in the chair. When selecting a surgeon to perform your patient's implant surgery, you should ask the following questions:

- How much additional training have they received on dental implant surgery?
- How many dental implants have they placed?
- How long will the dental implant surgery take?
- Will computer technology be used to guide and position the dental implant?
- How long will it take for a full recovery?

As a periodontist, we are uniquely qualified to assess your patient's gums and underlying bone structure to determine if they can support and sustain a dental implant. If not, we can begin to build the foundation with specialized surgical procedures, including tissue and bone regeneration, to help rebuild the strong foundation needed to bear the load of an implant during chewing, etc.

Feel free to contact our office for more information. We are here to answer you and your patient's questions honestly, accurately and without pressure.

The goal in our practice is to serve our referring doctors and their patients with excellence in both periodontal therapy and dental implant care. We strive to create a warm and friendly environment. We provide customized patient care where the clinical and emotional needs of each patient are met. While our entire team is proud of the care we provide, we can never forget that we must earn your trust, and that of your patients, every day. Thank you for the chance to serve you and please feel free to let us know if there is anything you need from our office.
