Dr. Singh has written many articles on dental implants and periodontics for the Chicago Tribune.

Knowledgeable, High-Tech, Full-Service DENTAL IMPLANT TREATMENT

Dr. Singh is a highly experienced periodontist, a specialist in the treatment of gum and bone tissue, and in the placement of dental implants. With over 20,000 implants placed, he is one of the most experienced implant surgeons in private practice in the United States.

At his state-of-the-art dental office in Oakbrook Terrace, Dr. Singh provides patients with full-service dental implant treatment, from the initial consultation to the final new teeth. "I get to change people's lives on a daily basis," he says. "I love being able to give patients the opportunity to have better overall health and the ability to smile and chew with confidence."

State-of-the-Art 3D Technology

To provide patients with the best care, Dr. Singh has equipped his office with the latest technology. A 3D dental CT scanner enables him to make dental implant treatment precise, efficient and minimally invasive, and a high-tech in-house milling

unit gives him the ability to craft beautiful replacement teeth very quickly and reduces costs for patients.

Friendly, Personal Care

Patients appreciate Dr. Singh's ability to put them at ease. "Dr. Singh has a great personality; very friendly, very approachable," says Brenda, who received implants. "He made me feel like I mattered. And the entire staff made me feel like I was part of the family. They even called me afterward a couple of times just to see how I was doing."

Affordable Treatment

Dr. Singh keeps his rates affordable so that as many people as possible can enjoy the benefits implants have to offer. The office works with patients individually and offers pay-as-you-go plans, as well as customized long-term payment plans. "We do the right thing for each patient," says Dr. Singh.

Dr. Singh regularly lectures on dental implant therapy and periodontics to general dentists, dental hygienists, dental students, dental auxiliary staff and the general public.

For the past six years, Dr. Singh has volunteered at his daughter's elementary school, helping educate children on the importance of dental health.

AMARIK SINGH, DDS, MS, MICOI

Dr. Amarik Singh is a leading periodontist and implant surgeon in the Chicagoland area. He graduated at the top of his class from Northwestern University Dental School in 1997 and went on to complete advanced training for his Specialty Certificate in Periodontics and a Master's Degree in 1999.

He has treated thousands of periodontal patients, has successfully placed over 20,000 dental implants and has completed over 1,000 full-mouth reconstruction cases.

Dr. Singh has received the Top Dentist award from Consumers' Research Council of America every year since 2009. He has a Mastership from the International Congress of Oral Implantologists and is a member in good standing of several dental and periodontal associations. He founded an advisory board for both doctors and dentists and is among a select group of dentists who advise several of the world's largest implant companies.

WHAT IS A PERIODONTIST?

From "peri" meaning around and "odont" meaning tooth, a periodontist is an expert in the treatment of the gum tissue and bone surrounding teeth and implants. A periodontist has specialized training in dental implant placement and the diagnosis and treatment of periodontal disease, as well as cosmetic periodontal procedures. Periodontists have extensive training beyond dental school.

MINIMALLY INVASIVE

Full-Service, Custom Implant Treatment in One Office

Dr. Singh's office is a one-stop shop for dental implant treatment, where every step is completed under one roof.

His experience, expertise and use of 3D technology and microsurgical techniques make treatment convenient, precise and minimally invasive, and enable him to produce superior results.

Patients get completely customized and personal treatment at Periodontal Implant Associates.

Dental implants are one of the miracles of modern dentistry—no longer do patients have to suffer with missing teeth or endure the discomforts and disadvantages of temporary solutions such as dentures and partials. Dr. Singh has helped thousands of patients receive the benefits of dental implants. He provides minimally invasive treatment that can help anyone restore their smile to full health, function and beauty.

Highly Trained and Experienced Implant Dentist

Dr. Singh has personally placed over 20,000 dental implants, including more than 1,000 for full-mouth reconstruction cases, making him one of the top implant dentists in the country.

As part of his dental specialist education, Dr. Singh received extensive training in advanced dental implant procedures, including any gum or bone grafting procedures that may be necessary for treatment to be a success.

For his outstanding results, Dr. Singh was awarded a Mastership from the International Congress of Oral Implantologists, an honor only awarded to highly experienced implant dentists who have shown superior skill in practice. He has additionally achieved Diamond Partner status with Nobel Biocare, the original pioneer of dental implants and a world leader in dental implant solutions.

Dr. Singh regularly lectures on dental implants to dentists and dental students both locally and nationally.

Personal, Custom Treatment in a Beautiful Office

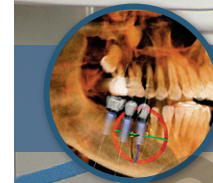

When it comes to implants, one size doesn't fit all. For optimum longevity, aesthetics and function, Dr. Singh gives each patient custom treatment. "I design the implant placement and ensure the implants are placed securely in the correct bone levels so the final teeth look and feel natural and function properly," he says. He also takes into account how the implant affects the jaw joint in order to avoid issues such as TMJ disorder.

Fast, Comfortable Procedure

Thanks to Dr. Singh's experience and his use of 3D planning and surgical guides, the implant surgery itself is a fast procedure, and this helps make for a better outcome. "The number one cause

DENTAL IMPLANTS

Having placed over 20,000 dental implants, Dr. Singh is one of the most experienced implant surgeons in the U.S.

Dr. Singh plans the implant surgery using 3D X-rays and special 3D software. This makes the implant surgery efficient, accurate and minimally invasive.

of post-op complications is because the surgery took too long," says Dr. Singh. "Because of our way of working, we can avoid that, and it is also more comfortable for patients."

To further increase comfort, patients are offered pillows and blankets, and they can watch TV or listen to music during their treatment. For fearful patients, Dr. Singh also has sedation options available.

Many Budget Options

The practice accepts most insurance and provides many affordable financing options, including pay-as-you-go treatment with staggered payments. Dr. Singh also gives different treatment options to accommodate a patient's budget. He explains the options in detail so that the patient can make an informed decision about their treatment.

Complete Treatment in ONE LOCATION

Periodontal Implant Associates offers comprehensive dental implant treatment in a single location. Using the latest 3D technology and a full-service in-house lab, Dr. Singh provides everything from the initial exam and diagnostics to implant placement and the attachment of natural-looking new teeth—all in his modern Oakbrook Terrace office. By providing complete treatment, he is able to maintain the highest standards of care and minimize costs. Other dentists routinely recommend Dr. Singh as the best choice for dental implant treatment because of his skill, knowledge, and experience.

Benefits of DENTAL IMPLANTS

Implants have many benefits compared to other forms of tooth replacement:

- Implants look, act and feel like natural teeth. People usually do not notice any difference.
- Implants let you talk and chew just like with natural teeth.
- Implants don't require alteration of adjacent teeth, as with dental bridges.
- Implants are the strongest and longest-lasting replacements for missing teeth.
- Implants preserve bone in the jaw and prevent the unattractive facial sagging and loss of structure that occurs, over time, with dentures.

Real PATIENT STORY

"My dental implant treatment went smoothly, and I was so happy, I referred my family members. Dr. Singh is knowledgeable and friendly, and his team is friendly and educated. They use the best technology, and the practice has beautiful decor."

"I can now bite, smile and chew without pain, and, more importantly, with confidence."

— Richard, business owner, Oakbrook Terrace

What Is a DENTAL IMPLANT?

A dental implant is an artificial tooth root made of titanium and placed in the jawbone.

Implants are used to replace single and multiple missing teeth. Crowns, a dental bridge or dentures are attached to the implants to provide lifelike new teeth.

Why See a Periodontist for Dental Implants?

By the time a periodontist has finished his seven years of dental training, which include three years focused on implant and gum surgery, he has already completed hundreds of implant cases supervised by top implant surgeons. In the course of practice, a periodontist such as Dr. Singh treats thousands of implant cases and runs across any type of complication possible. As a result, patients can expect:

- High success rates.
- Competence in treating complex cases.
- The ability to avoid or quickly handle any complications.
- Reduced risk of implant failure.
- Quick and efficient treatment, which equals shorter time in the chair, faster healing and less discomfort.

Friendly,
CUSTOM TREATMENT

Dr. Singh carefully plans each step of the implant treatment for every patient. He takes into account multiple factors that can vary in each individual, such as the patient's bite and the final tooth or teeth aesthetics. Such care and detail not only assist in achieving a high success rate, but they also ensure his patients' experience is pleasant and that they come away satisfied with their new teeth.

Friendly Care

Dr. Singh and his staff are known to be friendly and kind and to take the time to listen to their patients and explain procedures. "He's really personable," says one patient. "He goes the extra mile to take care of you."

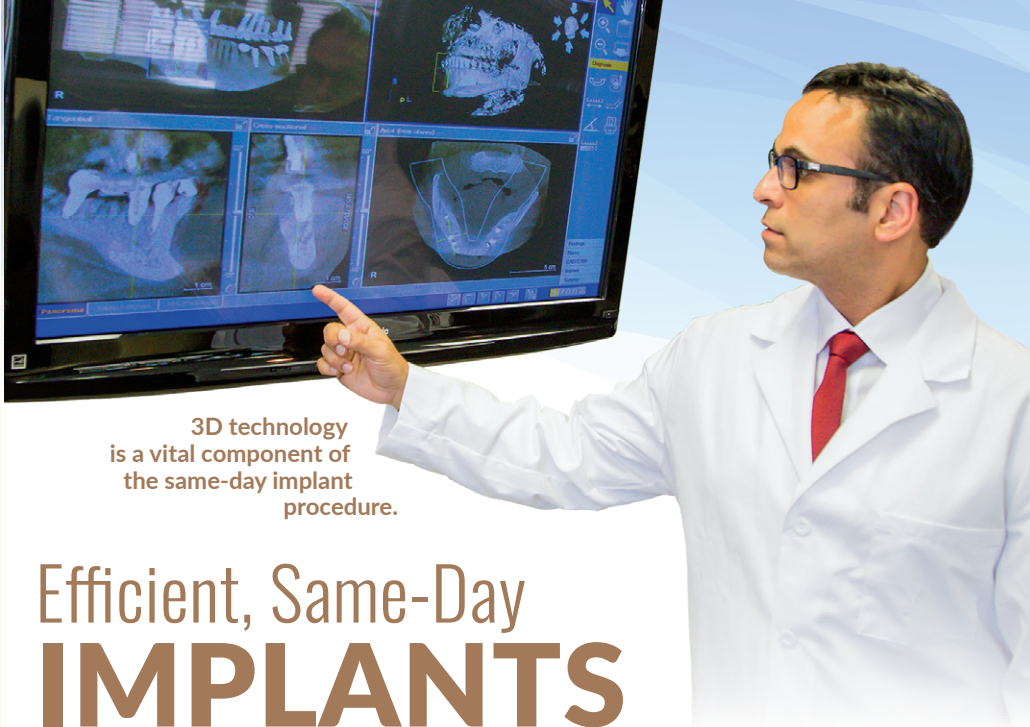

The first step of implant treatment is a consultation with Dr. Singh. He discusses the patient's concerns and makes a diagnosis of the problem.

Dr. Singh takes 3D X-rays and performs virtual surgery so that the actual surgery is precise, minimally invasive and has the best outcome.

Patients receive friendly, comfortable and reassuring care. "We make sure our patients feel comfortable and at ease," says Dr. Singh.

3D technology is a vital component of the same-day implant procedure.

Efficient, Same-Day
IMPLANTS

Using advanced 3D technology, Dr. Singh can extract a tooth, as needed, place an implant and attach a cosmetic tooth in as little as one hour.

Up until recently, placing dental implants was a time-consuming process that took one to two years to complete. Now, due to advances in technology and minimally invasive approaches, it is possible to extract a tooth and place an implant and a functional cosmetic tooth in one appointment. Everything required needed to complete the treatment is available in Dr. Singh's office, keeping costs low for his patients.

The Right Experience and 3D Technology

In order to successfully place implants and new teeth in an hour, the doctor needs to have sufficient experience and a 3D imaging system. Dr. Singh has both. The use of 3D technology enables Dr. Singh to plan in advance exactly

where to put the implant and thus avoid a prolonged surgery. In addition, Dr. Singh's extensive experience enables him to make the surgery very efficient. "In this case, fast is good," says Dr. Singh. "You want to keep surgery to a minimum to avoid exposure of the root and tissues and to minimize trauma. This assists in a smooth recovery and successful outcomes."

Fast Help When It Counts

Thanks to his same-day implant procedure and in-house lab, Dr. Singh is able to provide fast help when it counts. "Just recently we helped a woman whose bridge was falling out. She was so upset, but we were able to work her into our schedule the same day and gave her four implants and new teeth in that one appointment," says Dr. Singh.

Real PATIENT STORY

"I had so many problems—infection, crowns that had broken off and a bridge that came out. I was eating on one side of my mouth for a number of years and had neck problems. I was tired of going to the dentist to get my teeth fixed.

"Dr. Singh extracted the infected teeth and put in implants and new teeth in just a few hours.

"There was no pain in the chair, and I even drove myself home after the procedure.

"I can chew normally again, and my neck problems went away. I can eat anything I want now, including steak and corn on the cob!" —Ron, retired, Schaumburg

Personalized, Custom-Crafted
NEW TEETH
Made in Dr. Singh's
State-of-the-Art
IN-HOUSE
DENTAL LAB

Dr. Singh and his lab technicians design beautiful implant-supported replacement teeth and create them with their Zirkonzahn M4 milling machine. Dr. Singh ensures the teeth are not only functional but also beautiful and natural-looking.

A smile makeover with dental implants can make a huge difference to a person's quality of life. In addition to being able to chew and bite properly, a new smile can give a tremendous confidence boost. Patients like Matt, who received implants from Dr. Singh, can attest to that. "I can finally smile," says Matt. "My teeth were a mess—I needed root canals and bridges, and I had missing molars. I chewed with my front teeth for ten years. And I never smiled before in photos; I just gave a grin. Dr. Singh gave me my teeth back, and now I smile, and I try to show off my teeth. I get complimented on my smile every day!"

Custom-Designed New Teeth

Dr. Singh provides boutique-style service; he personally consults with each patient and custom-designs the new teeth according to the highest standards of quality and according to the patient's exact wishes. "To ensure the best results and keep implant treatment affordable, I built a state-of-the-art dental lab in my office," says Dr. Singh.

Dr. Singh has a team of full-time lab technicians who digitally scan, design, and mill dental restorations quickly, while ensuring ideal aesthetics and long-term success. "My lab techs are truly artists,"

says Dr. Singh. "Patients can bring in pictures from when they were younger and liked the appearance of their teeth. We can design the size, shape, fit, and color of the new teeth exactly how the patient wants, and fabricate them onsite."

Properly Aligned Bite for Comfort and Long-Lasting Results

An important part of smile design is planning for a well-aligned bite. Doing so can prevent pain, discomfort and complications in the future. "We create the implant-supported new teeth in such a way that the bite is comfortable and doesn't cause jaw problems," says Dr. Singh. "This also helps prevent teeth grinding, which in turn helps the new teeth last longer."

This top-of-the-line in-house milling unit allows Dr. Singh to provide completely custom replacement teeth crafted in the practice's own dental lab.

Curt, New Teeth in One Day Patient

Teeth too broken-down to chew your food?
Are your teeth beyond saving?
Don't want the hassle of dentures?

NEW TEETH IN ONE DAY!

Affordable Implant-Supported Full-Arch Teeth Replacement

Dr. Amarik Singh provides fixed-in teeth with the state-of-the-art New Teeth in One Day procedure, a revolutionary treatment option to replace teeth without bone grafting—in just one appointment.

When Curt came to Periodontal Implant Associates, he hadn't been smiling for over 17 years. "I didn't like to smile because of my chipped and discolored teeth," he says. Curt had gone to several doctors and tried traditional dentistry with root canals, fillings and crowns, but it just wasn't working for him. "The infection in his mouth was getting into his bloodstream," says Dr. Singh. "He had generalized decay and periodontal disease."

The Solution: New Teeth in One Day

Patients with broken-down teeth that are beyond saving, or patients who wear dentures, can get lifelike new teeth in just one day. "Due to advances in technology and 3D imaging, we now

have a procedure known as New Teeth in One Day, where we can remove infected teeth, place the implants and fix in new teeth in one appointment," says Dr. Singh. "Patients like Curt can walk out and are able to bite, smile and chew with confidence."

Curt was very happy with his results: "I can't even begin to describe how happy this makes me feel to look in the mirror and smile. I wish I had done this 10 years ago!"

How New Teeth in One Day Works

The New Teeth in One Day procedure makes use of healthy bone in the jaw, typically near the nose and chin. "What we do is angle long implants to engage the healthy, stable bone, thus avoiding unnecessary, lengthy and costly bone

grafting," says Dr. Singh.

New Teeth in One Day operates on the principle of distributing the load across all four implants by using teeth made into one unit. Creating the custom prosthetics with his in-house lab gives Dr. Singh control of the size, shape and color of the new teeth, eliminates the wait for teeth to come back from an outside lab, and is cost-effective for patients.

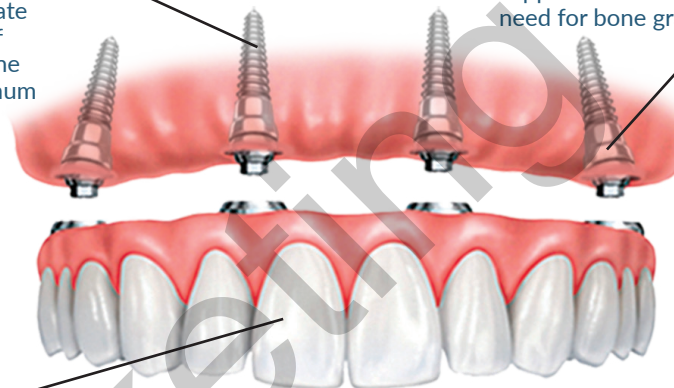

Who Are Candidates for New Teeth in One Day?

Dr. Singh routinely treats patients who have been told they are not candidates for implants. He uses his 3D imaging system to find the best available bone to support the implants. "Ninety-nine percent of the people I consult with are candidates for New Teeth in One Day," he says.

How New Teeth in One Day Works

The implants are placed in areas with an adequate volume of dense bone for maximum support.

Long, angled dental implants increase bone-to-implant contact, providing strong support and eliminating the need for bone grafting.

The new teeth are created in Dr. Singh's office and are made out of natural-looking acrylic or zirconia. They are made into one unit so that the load is evenly distributed and chewing power is strong.

Experienced and Skilled

Dr. Singh completes four to five cases of New Teeth in One Day per week. As a periodontist, he specializes in the bone and gum tissues of the mouth and in the placement of dental implants, making him particularly qualified to do the New Teeth in One Day procedure.

Comfortable and Safe

New Teeth in One Day is the least invasive full-mouth implant replacement option. Dr. Singh uses safe, FDA-approved components for New Teeth in One Day and, with his experience, he can predict and handle any issues that might arise. Because of his expertise and technology, it only takes Dr. Singh two hours per arch to extract teeth, place implants and fix in new teeth. Recovery time is a few days, at most.

"Dr. Singh and his team did a fantastic job of making me comfortable," says Curt.

Affordable Treatment

Dr. Singh works hard to help as many people as possible enjoy the miracle of New Teeth in One Day. He keeps his rates affordable and works with patients on an individual basis. Interest-free financing options and staggered payment plans are available (see page 15). He built a lab in his office in order to create the teeth in house, saving patients time and money—and also ensuring a higher level of quality control.

Less than 1% of dentists in the world have the technology, skill and resources to provide this type of treatment completely in house. As a result, Dr. Singh's New Teeth in One Day treatment is often 10–20% less than national chains.

3D X-rays from the CT scanner are used to find the best quality jawbone for implants.

Dr. Singh explains the treatment in detail and answers any questions.

Real PATIENT STORY

"I went to two national chains, and while they were helpful, I knew Periodontal Implant Associates was the place for me. I felt the most comfortable there, and knew I would be getting very personalized treatment. The staff were very friendly, and Dr. Singh explained what was going on in a very calm and gentle way.

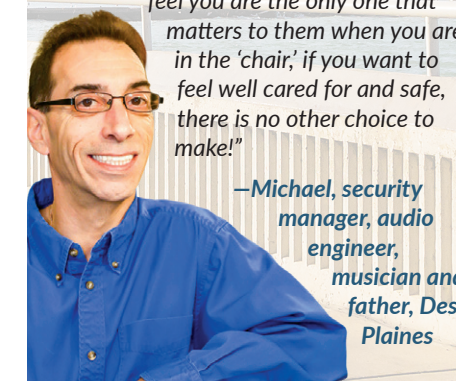

"On the day of the procedure, I was scared. The staff were very understanding, and all through the procedure, Dr. Singh explained everything, step by step, keeping me calm. Some hours later I had new teeth!

"Now, the first thing people notice about me is my smile. No one knows I have prosthetic implants. To everyone, they look natural. It has also helped my self-confidence.

"If you are considering getting New Teeth in One Day, forget the national chains if you want personalized care. If you want to feel you are the only one that

matters to them when you are in the 'chair,' if you want to feel well cared for and safe, there is no other choice to make!"

—Michael, security manager, audio engineer, musician and father, Des Plaines

NEW TEETH IN ONE DAY BEFORE & AFTER PHOTOS

FULL-ARCH IMPLANT TREATMENT From a Specialist

Dr. Singh is a periodontist who specializes in advanced dental implant procedures such as New Teeth in One Day. Working in his state-of-art dental surgical facility with a fully staffed in-house lab, Dr. Singh and his team of experts can diagnose, plan, create and place a full arch of new teeth from beginning to end—all in one office, and in just one day. Few practices throughout the U.S. offer such comprehensive expertise, technology and comfort to every patient. It's why people have traveled a thousand miles to have Dr. Singh give them their new smile.

What to do about TEETH THAT ARE BEYOND SAVING

Thanks to the New Teeth in One Day procedure, patients with broken-down teeth don't have to settle for uncomfortable, loose-fitting dentures that need to be removed every night for cleaning.

Patients who have broken-down teeth that are beyond saving may dread the idea of needing dentures. Dentures are uncomfortable, they slide around when you talk and can even fall out!

New Teeth in One Day was created for patients who need their teeth replaced but want a more stable, more comfortable, natural-looking and -acting teeth replacement solution.

You Don't Have to Get Dentures

"The majority of our New Teeth in One Day cases are people who don't want dentures and have been told that their teeth are terminal and nothing else can be done," says Dr. Singh. "Most of these patients can get New Teeth in One Day. Their life can be turned around in just a single day."

"I came to Dr. Singh because I absolutely hated my dentures!" says Nalini, a New Teeth in One Day patient. "They were causing me pain, discomfort and constant frustration. In one appointment,

Dr. Singh shows a patient the benefits of receiving New Teeth in One Day.

Dr. Singh replaced my dentures and gave me teeth that stay in my mouth—all in a couple of hours! I love my smile now, and I can even eat what I want!"

No Need for Bone Grafting

"For the majority of patients, bone grafting is not necessary," says Dr. Singh. The New Teeth in One Day procedure utilizes the available bone in the jaw to support four dental implants in each arch. "Patients who have severe bone loss can still be candidates for New Teeth in One Day," says Dr. Singh. "In certain cases, modifications can be made to the implant placement technique, and special implants can be used to take advantage of available bone."

Dr. Singh offers a Complimentary Dental Implant Consultation. Call 630-250-5330 to schedule.

The Problems With Dentures

- Dentures provide only a maximum of 25% of natural chewing power, which means a restricted diet for most people.
- Dentures constantly lose their fit, and as a result, they rub against the gums, causing sores and making chewing painful, which further discourages a healthy diet.
- Dentures slip and can affect a person's ability to speak.
- Bone loss occurs when teeth are missing, and dentures accelerate this bone loss process, causing eventual collapse of the facial muscles. As shown to the right, the chin moves toward the nose, the lips become thinner, and the cheeks sink in, causing deep wrinkles and folds.
- Dentures can be uncomfortable, have to be removed at night, require messy adhesive to keep them in place, and the palate on the top denture can affect the sense of taste.
- As a result of the above, dentures can significantly reduce the quality of one's life and self-confidence.

The Benefits of New Teeth in One Day

- 99% candidacy rate.
- One-appointment procedure, including extractions, implant surgery and new teeth.
- No bone grafting needed.
- New Teeth in One Day gives the patient fixed-in teeth that never need to be removed.
- 90–95% normal chewing power.
- Ability to eat the foods you want and need to stay healthy.
- Keeps bone stimulated and prevents bone loss.
- Permanent results.
- Natural tooth functionality.
- Immediately improves quality of life and self-confidence!
- Best of all, Dr. Singh makes New Teeth in One Day affordable with interest-free financing options and staggered payment plans.

Real PATIENT STORIES

from New Teeth
In One Day!

About 50 percent of adults 55 to 65 use partial or full dentures. On average, in the United States, people over the age of 50 are missing ten or more teeth. Lack of teeth, poorly functioning teeth or an unattractive smile can lower a person's quality of life and reduce self-confidence.

"Whether the missing teeth are due to periodontal disease, bad genetics, decay from poor diet, disease, wear or just bad luck, at some point traditional dentistry fails these people," says Dr. Singh. "And whether the patient is male or female, young or old, New Teeth in One Day can change his or her life—in just one appointment!"

Dr. Singh has treated many patients with New Teeth in One Day. Here are just a few of their stories.

"Before coming to Dr. Singh, I had an upper denture and could not eat. Also, I was not confident.

"On my first appointment it was raining, and I lost my way. When I finally arrived at the office, I was frustrated and determined I wasn't doing any treatment! However, once I met Dr. Singh and his team, my perception

changed. They are amazing, and I am very glad I chose this office!

"I like everything about Dr. Singh and his office. I cannot describe how amazing my experience has been. I'm very happy now with my new teeth. I can eat normally, I have no pain, and I have a good smile!"

—Zrinka, retired, Glenview

"Dr. Singh's confidence in being able to perform the New Teeth in One Day procedure changed my life. The process was quick with only two appointments, and recovery time was only a few days. Everyone at the office is personable and helpful, especially because my work schedule can be overwhelming.

"I now have self-confidence in my personal and professional life thanks to Dr. Singh!"

—Agnes, portfolio manager, Chicago

"Dr. Singh's wide range of knowledge, his meticulous attention to detail and flair for organization ensures long-lasting results for his patients."

— Jim Parashos, owner of
Heritage Removable Prosthetics

"I came from a very poor dental experience before I found Dr. Singh. It had taken over two years before I had a successful set of dentures. I was not happy with the whole process. After my wife recommended I see another doctor, I met with Dr. Singh, and he went through a very technically oriented evaluation of my teeth.

"Within a few months, and without any complications, the whole process of getting a great looking set of implants and teeth was successful. Now I can eat anything, and my smile is great. Thank you, Dr. Singh." —John, retired, La Grange

State-of-the-Art TECHNOLOGY

Dr. Singh uses many of the advances in dental technology to make treatment precise, efficient and comfortable.

"Our office has the latest technology that is out there, including a top-quality milling machine," says Dr. Singh. "Because of technology, we are able to be more predictable, more definitive and offer better long-term results."

"In order to provide top-end service to patients, we want to offer minimally invasive microsurgical options. We want to minimize pain. We also want to minimize complications, and we want to minimize cost. To do that, you have to have the right technology."

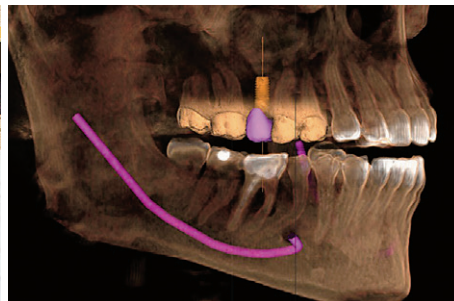

Dr. Singh's state-of-the-art Galileos dental CT scanner captures a detailed, 3D X-ray view of the patient's mouth. He uses this for precise diagnosis and planning.

With an intraoral camera, Dr. Singh can show patients the inside of their mouths in full color.

Dr. Singh uses a digital scanner to take impressions without using the uncomfortable molds and goopy impression material needed to take traditional impressions.

Using the images from the CT scanner on advanced 3D software, Dr. Singh can analyze bone density and can see exactly where the nerves, sinuses and other structures are located. This technology allows for the most accurate diagnosis and dental implant treatment planning, which ensures optimal results for his patients.

Low-radiation digital X-rays accurately capture detailed images of the teeth in two dimensions.

COMFORT AND SEDATION

Dr. Singh's patients can receive the treatment they need in a low-stress, very relaxed environment. Dr. Singh performs surgeries quickly and efficiently, reducing both time in the chair and postoperative discomfort. For fearful patients, or for longer procedures, he offers the following sedation options:

Twilight Sedation

For patients who are anxious or fearful, Dr. Singh provides moderate sedation using oral medications combined with nitrous oxide. This allows the patient to relax and doze during their procedure, but they can be easily awoken to answer questions or follow instructions.

General Anesthesia

Patients who are very fearful or undergoing an extensive procedure can be given general anesthesia. The anesthesia is provided by an experienced, certified anesthesiologist, who supervises the patient while they are under sedation.

NEED TEETH REPLACED? Know Your Options

There are three basic options to replace missing teeth: dentures, bridges and dental implants. The most stable and lifelike option is an implant. Dr. Singh provides several implant options. He consults with the patient to understand what is wanted and then gives a diagnosis. Based on the consultation, he provides treatment options that take into account the patient's situation, desires, budget and insurance.

Replacing a Single Missing Tooth

Single missing teeth are replaced by an implant topped with a porcelain crown, usually in just one hour. If a tooth has to be extracted, the implant can be placed right away and usually also the crown. People with a long-term missing tooth or soft bone sometimes require bone grafting and a waiting period to allow the implant to integrate fully into the bone.

Single Dental Implant

Replacing Multiple Teeth

Dr. Singh can replace multiple adjacent missing teeth with individual implants or with an implant-supported bridge. Using an implant-supported bridge, Dr. Singh can replace up to five adjacent teeth with a bridge that is supported by two dental implants.

Implant-Supported Bridge

Snap-In Dentures

Dr. Singh can replace a full arch of teeth with dentures that snap onto implants and are removable. Dentures can be stabilized with as few as two implants in an arch. The dentures snap in and out and are easily removed for cleaning.

Snap-In Denture

New Teeth in One Day

Dr. Singh recommends the New Teeth in One Day procedure for patients who need full-arch teeth replacement. "New Teeth in One Day is the most cost-effective and least invasive option for replacing a full arch of teeth," says Dr. Singh. See page 8 to learn more about New Teeth in One Day.

Been Told You Aren't a CANDIDATE FOR IMPLANTS?

Dr. Singh routinely sees patients who have been told they are not candidates for dental implants. "Even when someone has been told they can't get implants, we can often help them," says Dr. Singh. "Thanks to our experience and our use of 3D technology and advanced implant techniques, we can successfully provide implant treatment to almost anyone."

Treating Complex Cases

Dr. Singh has provided dental implant treatment to thousands of patients; with over 20,000 implants placed, he is one of the most experienced implant surgeons in the country. He has seen every possible scenario, and thanks to his experience and his advanced training, he can successfully treat even the most complex cases.

Second Opinion

Dr. Singh welcomes patients looking for a second opinion. "When someone has doubts, we encourage them to come in for a thorough complimentary exam. I will let them know what is possible," he says.

Complimentary IMPLANT CONSULTATION*

Real PATIENT STORIES

"I never had my wisdom teeth taken out in my twenties. During my thirties, while pregnant, my wisdom teeth got infected in my third trimester. My general dentist said they could handle extracting them for me. After the procedure, I developed an infection.

"I went to see Dr. Singh for a second opinion since my general dentist advised me to see a specialist. I found Dr. Singh's website online, and I immediately knew I was coming to the right office. Dr. Singh explained to me what was going on and why I developed a dry socket and lockjaw.

"Dr. Singh guided me in the healing process and offered me a minimally invasive treatment that would address all of my concerns.

"I can't thank Dr. Singh enough for his guidance. I had a speedy recovery, and now I'm back to my normal routines. With Dr. Singh's approach to getting me healthy, his experience and his knowledge, I knew I was truly in great hands!

"I can't thank Dr. Singh and his team enough for all they have done for me!" —**Jaana, dance instructor, Schaumburg**

"Dr. Singh agreed to undertake my challenging case. An implant that another periodontist placed failed. Even though this type of situation is rarely encountered, Dr. Singh enthusiastically attacked the problem.

"Difficult cases are what Dr. Singh relishes. His approach sets him apart from other practitioners."

—**Algis, retired auditor, Michiana Shores, IN**

"As a busy professional, first and foremost I am dedicated to this office because the level of service is exceptional, and the results are amazing. Dr. Singh diagnosed what was a chronic and painful issue, and since I've been coming here, I'm no longer in pain or have any issues drinking ice water. His staff is always professional and courteous, and his facilities are state-of-the-art. Most importantly, his treatment worked and likely saved me from much more pain and extensive treatment 10 years from now. The diagnosis and treatment were minimally invasive and effective. My overall quality of life is better, as I'm not constantly feeling discomfort and pain in my mouth. I strongly recommend coming to Dr. Singh."

—**Rajiv, hotelier, Oak Brook**

"I came to Dr. Singh because I absolutely hated my dentures! They were causing me pain, discomfort and constant frustration. I even went to multiple consultations before Dr. Singh and was told I didn't have enough bone for implants.

"I was about ready to just give up searching until a family member of mine told me about Dr. Singh. Despite being discouraged, I decided to get one more opinion.

"When I met Dr. Singh, and he told me that I, in fact, had enough bone for the implants, I was relieved. Part of me believed it was too good to be true, but I trusted him and wanted more than anything to get rid of my dentures.

"In one appointment, Dr. Singh replaced my dentures and gave me teeth that stay in my mouth—all in a couple of hours! I love my smile now, and I can even eat what I want! With my dentures, I definitely couldn't eat apples, carrots, or other vegetables, so I was eating more unhealthy, soft foods.

"I even went overseas to see family and friends a few weeks after Dr. Singh worked on me, and they couldn't believe my smile! The best part is no one even knew that I had implants! I can't thank Dr. Singh enough!"

—**Nalini, retired, Elk Grove Village**

High-Tech, Knowledgeable and Friendly
Dental Implant and Gum Treatment

SERVICES
