

Amarik Singh, D.D.S., M.S. *Implantology and Periodontics*

Dr. Amarik Singh is a leader in Implantology and Periodontics and is committed to the highest standard of care. He has treated thousands of periodontal patients and successfully placed over 8,000 dental implants. A graduate of Northwestern University Dental School in 1997, Dr. Singh went on to obtain his Specialty Certificate in Periodontics and to receive his Master's Degree from Northwestern University in 1999.

Dr. Singh is part of a select group of practitioners in the country on the Advisory Board for Nobel Biocare, the world's largest dental implant company.

The Benefits of Dental Implants

Implants have the look, feel and function of natural teeth. They are the most attractive, the most natural, and the most comfortable replacement for missing teeth. Implants can replace teeth that have been missing since birth or teeth that have been lost to gum disease, infection, trauma, or decay. They can be used to replace a single tooth or multiple teeth, and they can dramatically increase the retention and stability of dentures.

Dental implants help distribute chewing forces throughout the jawbone, and thus help restore the chewing power lost with missing teeth. They also minimize the erosion of the jawbone that normally occurs when teeth are lost. Patients who have received dental implants comment that there is a significant improvement in the quality of their lives. Patients feel more confident and comfortable chewing and smiling. Implants also eliminate many of the problems associated with bridges, removable partials, and full dentures.

CONSEQUENCES OF TOOTH LOSS

Following tooth loss, loss of the underlying bone also occurs. As bone reduction occurs, problems associated with the lack of support can lead to denture discomfort, mobility and lack of retention. Continued loss of bone from the upper and lower jaws can affect the appearance of the face, giving the patient the appearance of premature aging.

HOW DENTAL IMPLANTS CAN BENEFIT YOU

Dental implants provide a foundation of support in the mouth for artificial teeth, helping to eliminate embarrassment associated with removable teeth. More importantly, implants improve your ability to chew and speak.

BENEFITS OF DENTAL IMPLANTS:

- Increases chewing function and taste
- Improves speech
- Preserves remaining natural teeth
- Provides increased comfort
- Improves self-esteem
- Eliminates partials/dentures
- Insures tooth stability
- Eliminates adhesives
- Reduces bone loss
- Restores natural tooth appearance

Services Offered:

- Implant Therapy
- Periodontal Therapy
- Root Canal Treatment
- Oral Surgery Procedures:
 - Wisdom Teeth Removals
 - IV Sedations
 - Surgical Extractions
